

SAI CHERISH POTLURI

Fremont, CA | (408) 207-6017 | saicherishpotluri1@outlook.com | [linkedin.com/in/spotluri](https://www.linkedin.com/in/spotluri) | github.com/saicherishpotluri

PROFESSIONAL SUMMARY

Backend Software Engineer building secure, high-throughput distributed systems across fintech, identity, and enterprise platforms. Strong in Java, Spring Boot, microservices, REST APIs, OAuth2/OIDC, SQL, AWS/Azure, CI/CD, and production observability. Delivered measurable latency, reliability, and security improvements for mission-critical services used at large scale.

TECHNICAL SKILLS

Languages: Java, C#, Python, SQL, TypeScript, JavaScript

Backend: Spring Boot, ASP.NET Core, REST APIs, GraphQL, Microservices, OAuth2/OIDC, JWT, Multithreading

Cloud & DevOps: AWS (S3, EC2, RDS, Route 53), Azure, Docker, Kubernetes, Jenkins, Azure DevOps, GitHub Actions, CI/CD

Data & Observability: JunoDB, Redis, PostgreSQL, SQL Server, Oracle, Datadog, Prometheus

Testing & Tools: JUnit, Mockito, NUnit, Postman, Git, Jira

PROFESSIONAL EXPERIENCE

Software Engineer | PayPal (Contract) | San Jose, CA

Feb 2025 - Present

- Built and enhanced high-volume Java and Spring Boot OAuth2/OIDC services for merchant, partner, and internal identity workflows across PayPal's distributed Identity Platform.
- Designed federated identity capabilities for JWT validation, token issuance, scope enforcement, and privilege checks, supporting secure third-party integrations.
- Reduced merchant login latency by approximately 400 ms by eliminating redundant service calls, optimizing execution paths, and improving multithreaded request processing.
- Strengthened scalability and reliability through least-privilege authorization controls, structured error telemetry, security fixes, and production monitoring across sandbox and production.
- Contributed across design, implementation, automated testing, deployment, and phased rollouts, coordinating high-risk changes through zero-downtime releases.
- Delivered authorization hardening features including client-level access restrictions, least-privilege scope validation, and production security fixes for critical identity services.
- Improved production debugging and operational visibility by adding structured error telemetry, enabling faster diagnosis of authentication failures across sandbox and production environments.
- Integrated MCP-based AI engineering workflows with Datadog, Atlassian, and GitHub MCP servers to accelerate issue investigation, code navigation, observability analysis, and developer productivity using Claude, ChatGPT, and Gemini.

Software Engineer | Devoir Software Solutions LLC | Chicago, IL

Jun 2023 - Jan 2025

- Developed microservice-style backend services using ASP.NET Core for user management, assessments, certification requirements, payments, and integrations on a large enterprise platform.
- Designed REST APIs and integration workflows with Pearson VUE, ExcelSoft, and BenchPrep, enabling reliable data exchange across distributed services.
- Improved API and database performance by optimizing SQL queries, stored procedures, and response flows with automated CI/CD releases.
- Implemented secure role-based authentication and authorization using Azure AD B2C and legacy SSO integrations while enforcing coding, testing, and maintainability best practices.
- Collaborated with product, QA, and operations stakeholders to clarify requirements, troubleshoot defects, and deliver production-ready features through the full Agile lifecycle.

Software Engineer Intern | Ace Data Solutions

May 2022 - Jul 2022

- Developed RESTful APIs and GraphQL services using C# and ASP.NET Core in a multilayer architecture, using Factory, Singleton, patterns.
- Integrated AWS S3, EC2, RDS, and Route 53 services and configured monitoring alarms to improve operational visibility, and issue detection.

Software Developer | Smartbridge Solutions

Apr 2019 - Jun 2019

- Developed RESTful APIs using Django and Flask and built a PostgreSQL-based location service for a ride-hailing platform.
- Integrated Razorpay payment services, performed API testing, resolved backend defects and developed React UI components.

PERSONAL PROJECTS

ClauseGuard: Built a 3-agent AI pipeline (Spring AI, Azure OpenAI, Azure Document Intelligence) that extracts contract terms, classifies clause-level risk severity against a fixed rubric, and generates plain-language negotiation recommendations.

Fitness AI Companion: Built a React, Bootstrap, Spring AI, and OpenAI-powered web application with BMI calculation, personalized exercise planning, and recipe recommendations.

Sticky Notes Application: Created a JavaScript and Appwrite BaaS application using ES6+ and async/await patterns for responsive note creation, persistence, and maintainable asynchronous workflows.

AI Image Recognition with Gemini: Developed a multimodal image-recognition tool using Google's Gemini AI model to process image and text inputs and generate context-aware responses.

EDUCATION & CERTIFICATIONS

Master of Science in Computer Science, Big Data Systems | Arizona State University | May 2023 | GPA: 3.84

Bachelor of Science in Computer Science | GITAM University | June 2020 | GPA: 3.40

AWS Certified Solutions Architect - Associate | [AWS Certified Cloud Practitioner](#)
